

SYNAPSE

The Parent's World

See the truth. Help at home. Learn what's next.

A parent's window into their child's learning — live progress, verified study, direct communication with teachers and school — plus something no platform offers: the parents themselves learn too.

The promise: no more end-of-term surprises, no more "I don't know what they're studying" — and a family that grows with the technology, not behind it.

Prepared 2026 · Working document

1. What the Parent's World Solves

Parents are a child's first teachers, yet they are usually the last to know: reports arrive at term end, WhatsApp rumors replace facts, and the technology their children use every day is a closed door. The Parent's World fixes all three:

Parent's problem today	How Synapse answers it
"I only find out at report time"	Live competence-level progress, trends and alerts — the truth as it happens
"Are they really studying?"	Verified study sessions: focus time, engagement, what was covered
"I can't help — I don't know the subjects"	Conversation starters and plain-language guides matched to this week's syllabus
"AI and apps are a mystery to me"	The Parent Academy: short lessons in AI literacy, digital skills and online safety
"Reaching the teacher is hard"	Direct messaging, meeting booking, and announcements in one official channel

2. The App at a Glance — Nine Pages

Page	Purpose
1. Home (Today)	All children at a glance: today's study, alerts, tonight's conversation starter
2. Progress	Per-child mastery dashboard: subjects, competences, trends
3. Study Reports	Verified study sessions and engagement evidence
4. Documents	Report cards, test results, certificates — as published
5. Connect	Messages with teachers & school, meetings, announcements
6. Home Support	How to help tonight: conversation starters & guides
7. Learn (Academy)	AI literacy, digital skills, online safety — for the parent
8. Alerts	Everything urgent, in one place, tuned not to spam
9. Me	Multi-child management, languages, privacy, settings

3. Page One — Home (Today)

- All children, one screen: today's verified study time, pending assignments, upcoming tests — switch between children in one tap.
- Tonight's conversation starter: "ask Chipo about osmosis — she practised it today" — matched to the actual syllabus, so any parent can help, no degree required.
- Priority alerts only: missed work, slipping mastery, absence — urgent things first, everything else in the Alerts page.
- School announcements and unread teacher messages.

4. Page Two — Progress (the Truth, Live)

- Mastery per subject and competence: "mastered 8 of 11 competences in Mathematics this term" — not a single mark, but the full picture.
- Trends term over term: improving, steady, or slipping — with the moment the change began.
- Class-average comparison: context without competition — is my child keeping pace?
- Exam-readiness: Synapse's estimate per subject, and what would raise it fastest.
- Career lens: what this term's competences unlock — nursing, engineering, accounting — so progress feels like direction.

5. Page Three — Study Reports (Verified)

- Session evidence: "Elena studied 32 minutes today — flashcards and 12 algebra questions, engaged, verified".
- Focus-time history: the week's study pattern at a glance — streaks, gaps, best hours.
- Optional learning confirmation (opt-in, parent-controlled): on-device verification that genuine engagement happened. No raw images — only the verified signal leaves the device.
- Notifications when it matters: no study for two days, a broken streak, a late-night session — the parent can act the same week, not at report time.

6. Page Four — Documents

- Report cards as published: school-branded PDFs arrive in the inbox the moment the school releases them — signed, sealed, archived.
- Test results and certificates: every marked assessment and achievement certificate, kept forever — no lost papers.
- Term summaries: a plain-language wrap-up per child, readable in two minutes, shareable with family.

7. Page Five — Connect (Teachers & School)

- Direct messaging: logged conversations with teachers and the school — read receipts, no phone-call tag, no lost WhatsApp threads.
- Meeting booking: teachers publish available slots; parents book in two taps; both sides get reminders.
- Announcements feed: the official channel — what the school says, not what the group chat heard.
- Two-way respect: teachers send canned updates in seconds ("your child mastered 4.1.4 this week"), parents reply in context.

8. Page Six — Home Support

- Conversation starters: matched to this week's actual syllabus — "tonight, ask about the water cycle" turns dinner into revision.
- Plain-language guides: every topic explained for adults in two-minute reads and audio — in English and major Zambian languages.
- Routine builder: a gentle shared study schedule the parent and child agree on; Synapse nudges both sides.
- Celebration cues: when the child masters a competence, the parent gets the good news and a suggestion to acknowledge it — recognition drives motivation.

9. Page Seven — Learn: The Parent Academy

The feature no education platform offers: the parents themselves learn. Short, practical, in plain language and local languages — because a family that understands the technology raises a child who uses it well.

9.1 Course Tracks

Track	What the parent learns	Format
AI Literacy	What AI really is, how Synapse uses it, how to check an AI answer, what it can and cannot do	5 lessons · 5 min each · audio + text
Digital Skills	Smartphone confidence: files, photos, PDFs, mobile money, safe passwords, data bundles	Hands-on, guided on the parent's own phone
Online Safety	Protecting children online: scams, grooming signs, screen-time agreements, reporting (ZICTA)	Scenarios + checklists
Supporting Learning	How children learn, encouragement over pressure, working with teachers, reading habits	Weekly tip + practical tasks
Money & Opportunity	Mobile money safety, budgeting for school costs, scholarships and bursaries to watch for	Monthly briefing + audio
Understanding the Curriculum	How Zambian education works: competences, ECZ exams, progression — demystified	Short series per level band

9.2 How It Works

- One lesson a week by default — five minutes, audio-first (works hands-free and low-literacy friendly), downloadable for offline.
- In English, Bemba, Nyanja and more; large text; no jargon.
- Synapses with the child's world: when Chipo starts learning web design, the parent gets "what web design is and why it matters" — the Academy explains what the child is doing, exactly when it becomes relevant.
- Certificates for completed tracks — celebrated in the family feed; some schools may recognize parent-graduates at open days.
- Ask Synapse: a plain-language Q&A; — "what is artificial intelligence?" — answered without jargon, cite-checked, in the parent's language.

10. Pages Eight & Nine — Alerts, and Me

- Alerts: one inbox for everything urgent — absence, missed assignments, slipping mastery, school notices — tuned by the parent (quiet hours, per-child settings).
- Me: multi-child management (one account, many children), language preference, notification controls, privacy settings (what the parent shares, what stays private), guardian-link management, offline downloads.

11. How the Pages Synapse

From → To	What flows
Child's study → Home	Verified sessions become today's family picture
Child's syllabus → Home Support	Conversation starters matched to this week's real topics
Child's new topic → Academy	"What web design is" arrives exactly when it matters
Teacher marks → Documents	Report cards and results publish straight to the parent inbox
Slipping mastery → Alerts	The parent acts the same week, not at term end
Academy completion → family	Certificates celebrated; engagement compounds
School → Connect	Official announcements, replacing the rumor group chat

12. Trust & Privacy

- Guardians see only their own linked children — enforced at the database level, not just the interface.
- Monitoring features are opt-in and parent-controlled; on-device processing for anything sensitive; nothing covert, ever.
- Schools see aggregates, not parent conversations; teachers see only their classes' families.

13. First Build (MVP Slice)

- Pages 1–6 with: Family Link, progress dashboard, verified study-time reports, documents inbox, messaging, alerts, and the first Academy track (AI Literacy).
- Later phases: meeting booking, routine builder, remaining Academy tracks, USSD result checks for parents without smartphones.

14. Why This Matters

- An informed parent is the cheapest, most powerful intervention in education. Synapse makes every parent informed — and then makes them more capable still.
- The family that learns together no longer fears the technology the child carries in their pocket. That is the Synapse difference.
