

SYNAPSE

The School's World

The school's operating system.

One branded platform where the head teacher, deputies, teachers, learners and parents are already connected — because they all live inside Synapse. The school doesn't adopt a new system; it simply opens the door to the one that already exists.

The promise: every stakeholder on one platform, every document carrying the school's name, and evidence the Ministry has never seen — for less than the school spends on the software patchwork today.

Prepared 2026 · Working document

1. What the School's World Solves

Schools today run on duct tape: an attendance app here, a WhatsApp group there, Excel for results, a printer for report cards, paper for letters — each with its own cost, its own logins, its own chaos. Because teachers, learners and parents already live in Synapse, the school gets all of it in one place, already populated:

School's problem today	How Synapse answers it
Scattered software & fees	One subscription replaces the attendance app, SMS service, results spreadsheets and communication tools
No live picture of learning	Real-time mastery across every class, subject and grade — today, not term end
Documents without identity	The school's logo, colors and EMIS header on every plan, report card, certificate and letter
Parents unreachable	Every learner has a linked guardian channel — see exactly who is and isn't connected
Inspection & Ministry pressure	Inspection-ready evidence exports, generated on demand
Teacher workload & burnout	AI planning and marking return hours to teaching — visible in the school's own analytics

2. The Console at a Glance — Ten Sections

Section	Purpose
1. Command	The live school dashboard — everything, today
2. People	Staff directory & roles, learners, classes, guardians
3. Academics	Schemes, pacing, exams, results, interventions
4. Documents	Branding, report cards, certificates, official letters
5. Communication	Announcements, events, emergency broadcast
6. Analytics	Performance per teacher, class, grade, subject
7. Operations	Attendance insights, timetable, (later) fees
8. Resources	School library: policies, circulars, schemes archive
9. Insights+	Year-over-year trends, benchmarking, forecasting
10. Settings	Branding, roles & permissions, subscriptions

3. Section One — Command (The Live Dashboard)

- Today at a glance: attendance so far, lessons in progress, assignments due, announcements pending approval.
- School mastery map: the whole syllabus, every grade — green, amber, red at competence level. One screen answers "how are we doing?" — zoom from school → grade → class → learner.
- Teacher pulse: planning activity, score-entry timeliness, class momentum — support the struggling teacher before it shows in results.
- Guardian coverage: what percentage of learners have a linked parent — and one-tap codes to close the gap.
- Alerts: anomalies surface themselves — a class falling behind pace, a subject underperforming across grades, an unmarked backlog.

4. Section Two — People

- Roles for everyone: head teacher, deputies, heads of department, teachers, bursar, support staff — each with exactly the access they need, nothing more.
- Four codes onboard a school: school code → staff codes → class codes → learner codes. An entire school connected in one afternoon, no IT department required.
- Staff directory: who teaches what, class loads, contact — always current because it updates itself.
- Enrollment management: learners, class lists, stream moves, new admissions — one source of truth, no spreadsheets.
- Guardian registry: every linked parent, per learner, per class — with connection status and history.

5. Section Three — Academics

- Syllabus pacing tracker: every class's position against the scheme of work — who is on pace, who is behind, by how many weeks.
- Exam scheduling & records: the term's exam calendar with conflict warnings; every result archived and analyzable.
- Intervention tracking: mark a weak competence school-wide, assign interventions, and watch the heatmap respond.
- Moderation: compare marking standards across teachers on the same competence — consistency, not blame.
- Knowledge bank growth: every uploaded paper enriches the whole school's question bank — the school's library of past papers becomes structured, searchable, exam-generating.

6. Section Four — Documents & Branding

- Brand once, everywhere: upload the logo, set colors and details — every plan, scheme, test, report card, certificate, transcript and letter carries the school's identity automatically.
- Report cards in bulk: the whole term's reports generated from live mastery data — school-branded PDFs, ready for the printing room.
- AI letter writer: official letters drafted in seconds — absence follow-ups, disciplinary, invitations, memos — on the school letterhead, in the right tone, reviewed and sent.
- Certificates & transcripts: achievements, leavers' transcripts, competition awards — produced in moments, archived forever.
- Policy center: school policies and circulars versioned and acknowledged — who has read what, proven.

7. Section Five — Communication

- Targeted announcements: to one grade, one class, staff only, parents only — or the whole school; read receipts included.
- Events calendar: exams, open days, sports, PTA — pushed to the right audiences automatically.
- Emergency broadcast: urgent alerts to all guardians instantly — with delivery confirmation. (SMS fallback for non-smartphone parents.)
- Every channel official: because conversations live in Synapse, the school has a record — no more "the WhatsApp group said" disputes.

8. Section Six — Analytics (Evidence)

- Any cut of the data: by teacher, class, grade, subject, gender, term, year — a question away, not a week of spreadsheet work.
- Year-over-year trends: is the school improving? Where? Since when? What changed?
- Benchmarking: compare against anonymized schools of similar profile — context for targets.
- Forecasting: predicted exam outcomes from current mastery — act months early, not after results.
- Inspection & Ministry exports: clean, branded, evidence-grade reports generated on demand — the inspection meeting starts from strength.

9. Sections Seven to Ten — Operations, Resources, Settings

- Operations: attendance insights and patterns; timetable builder (later phase); fees and payments (later phase) — each arriving on the same platform, no new system to buy.
- Resources: the school's document library — policies, schemes, circulars, past papers — searchable and shared to staff instantly.
- Settings: branding, role permissions, academic calendar, subscription and billing — the school controls its own house.

10. How the School Synapses With the Other Worlds

From → To	What flows
Teachers → School	Plans, scores, mastery — become the school's live evidence automatically
Learners → School	Study activity and results — no reports to compile, ever
Parents → School	Guardian-link coverage and engagement — visible and improvable
School → Teachers	Announcements, interventions, pacing expectations — land in their workspace
School → Parents	Official communications replace the rumor group chat
School → Ministry	Aggregated, anonymized evidence exports on demand
School → Itself	Every uploaded paper and shared plan compounds into institutional memory

11. The Money Case — One Subscription, Many Replacements

What schools pay for today	Replaced by
Attendance/registration software	Command + Operations (in Synapse)
SMS bundles for parent notices	Announcements + emergency broadcast
Results & report software/spreadsheets	Bulk branded report cards from live data
Printing & stationery for letters	AI letter writer on school letterhead
Past-paper collections & prep books	The auto-growing knowledge bank
Teacher overtime for paperwork	AI planning & marking (hours returned)
Consultants for inspection prep	On-demand evidence exports

Pricing shape: free for learners and parents (they are the network); schools subscribe per term by learner count, tiers scaling with depth (branding and analytics in, operations modules as add-ons). The school that tries Synapse for one term can price its old patchwork against it — and keep the receipt.

12. Trust, Privacy & Governance

- Role-based access down to the row level: a teacher sees their classes; a deputy sees their grade; the head sees the school; the Ministry sees anonymized aggregates — and nothing more.
- Learners are minors: guardian visibility is per-child only, monitoring is opt-in and parent-controlled, sensitive processing stays on-device.
- Every action logged: who saw what, who changed what — governance built in, not bolted on.
- The school owns its data: full export at any time, no lock-in hostage-taking. Confidence, stated in writing.

13. First Build (MVP Slice for Schools)

- Command dashboard, People (staff/learners/guardians + codes), branded documents and bulk report cards, targeted announcements, core analytics and Ministry export.
- Later phases: operations modules (timetable, fees), benchmarking and forecasting, SMS fallback, multi-school groups.

14. Why Schools Will Love It

- Zero adoption friction: the network is already there — the school simply claims it, brands it, and switches on the console.
- Identity restored: every document that leaves the school carries its name — pride in print, credibility in inspection.
- Evidence instead of anecdotes: staff meetings, board meetings, Ministry meetings — all start from live data.
- Money back to the mission: one subscription replaces the patchwork, and teacher hours return to teaching.
- Synapse doesn't ask the school to change how it works. It asks the school to stop paying for five tools when one nervous system already connects everyone it serves.
